INTRO

about our streaming services

Our live streaming service allows events to be transmitted over the Internet, regardless of the number of participants and the complexity of the content to be transmitted, always guaranteeing the best quality and functionality possible in each specific case.

Assuming that each event has a different level of technological demand, we present in this document three generalist options from the simplest to the most complete solution.

BASIC

solution

Our first and simplest suggestion allows you to do a basic transmission, in which a live image of the speaker and presentation slides can be streamed, but not simultaneously, although it is possible to switch between speaker and slides as often as necessary.

Streaming can be set up on social networks (eg Facebook or Youtube) or using a custom CDN (eg: www.example.2you.pt).

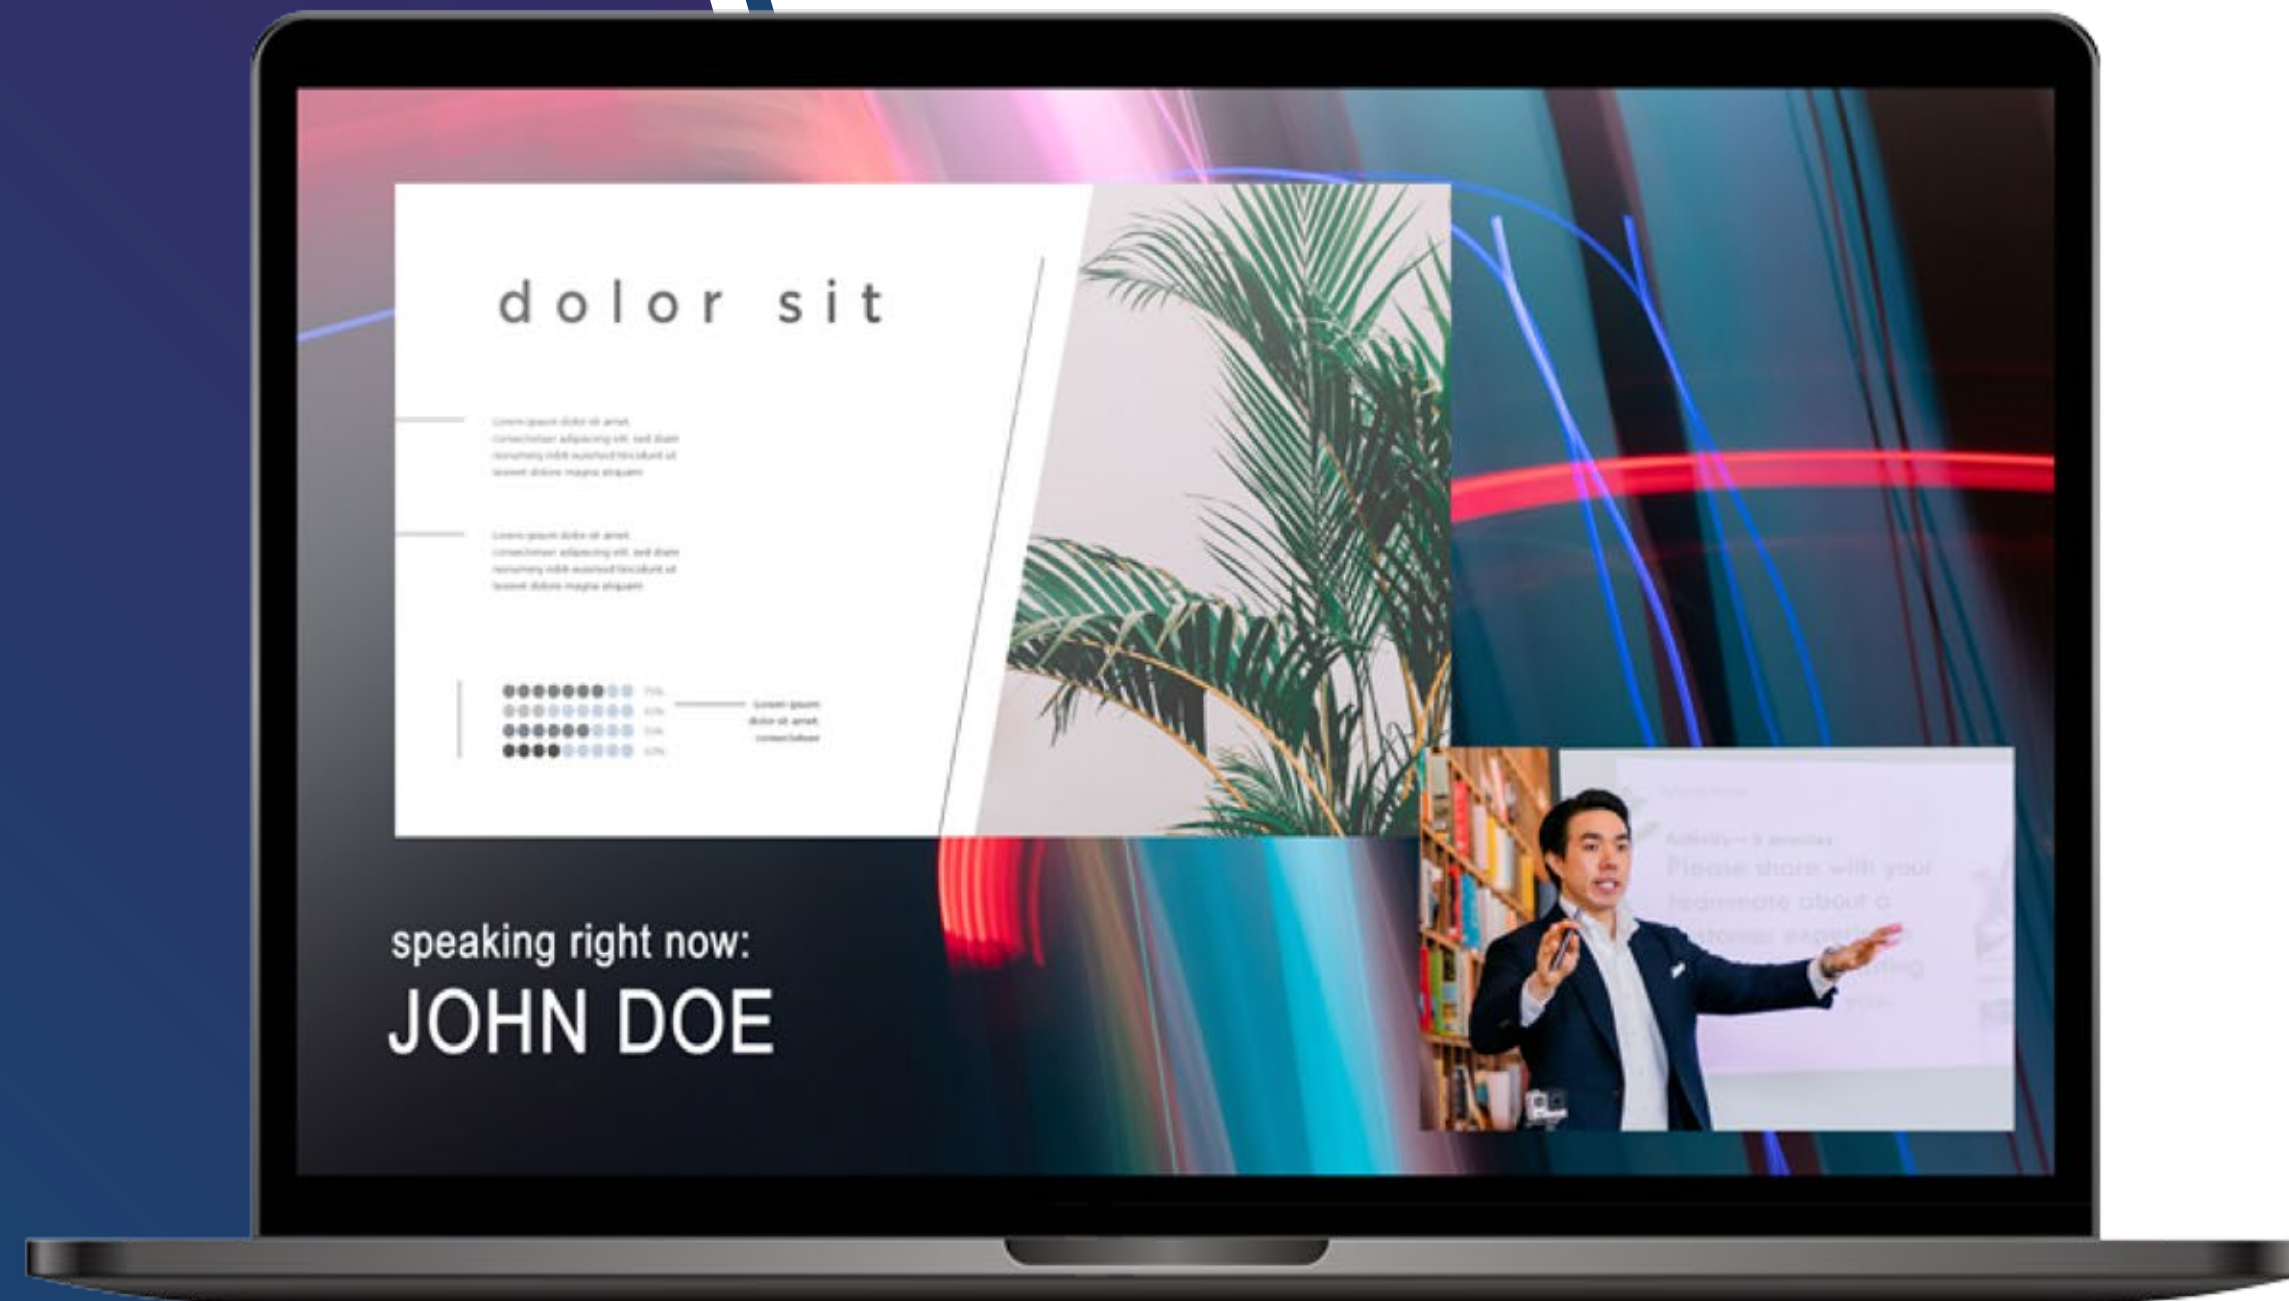

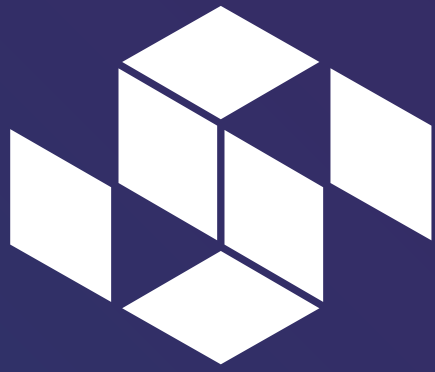

REQUIREMENTS:

1x PTZ Camera

1x A/V technician

INTERMEDIATE

solution

In this scenario, we take on a more versatile streaming, introducing the possibility of simultaneously transmitting multi-content using diferent windows (PIP), such as a slide presentation and live image of the speaker on top a custom background image.

Streaming can be set up on social networks (eg Facebook or Youtube) or using a custom CDN (eg: www.example.2you.pt).

REQUIREMENTS:

2x PTZ Camera

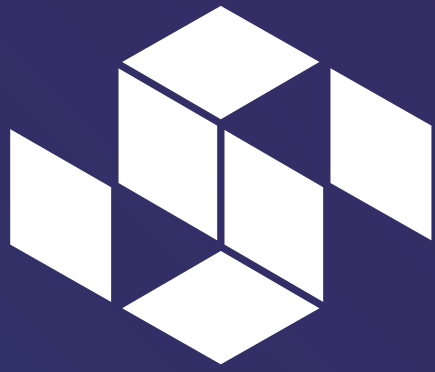

2x A/V technician

INTERMEDIATE SOLUTION

COMPLETE

solution

Our most complete solution includes the same features as the intermediate solution regarding layout and using PIP presentations. However, there are more advanced features available: we can restrict streaming some moments or sessions for certain groups of participants, questions can be sent during interventions (to which the moderator will have access to) and have long-distance speakers participating through skype or other communication apps.

Only custom CDN (eg. www.example.2you.pt) is available for this streaming solution. Social media streaming is not possible.

REQUIREMENTS:

2x PTZ Camera

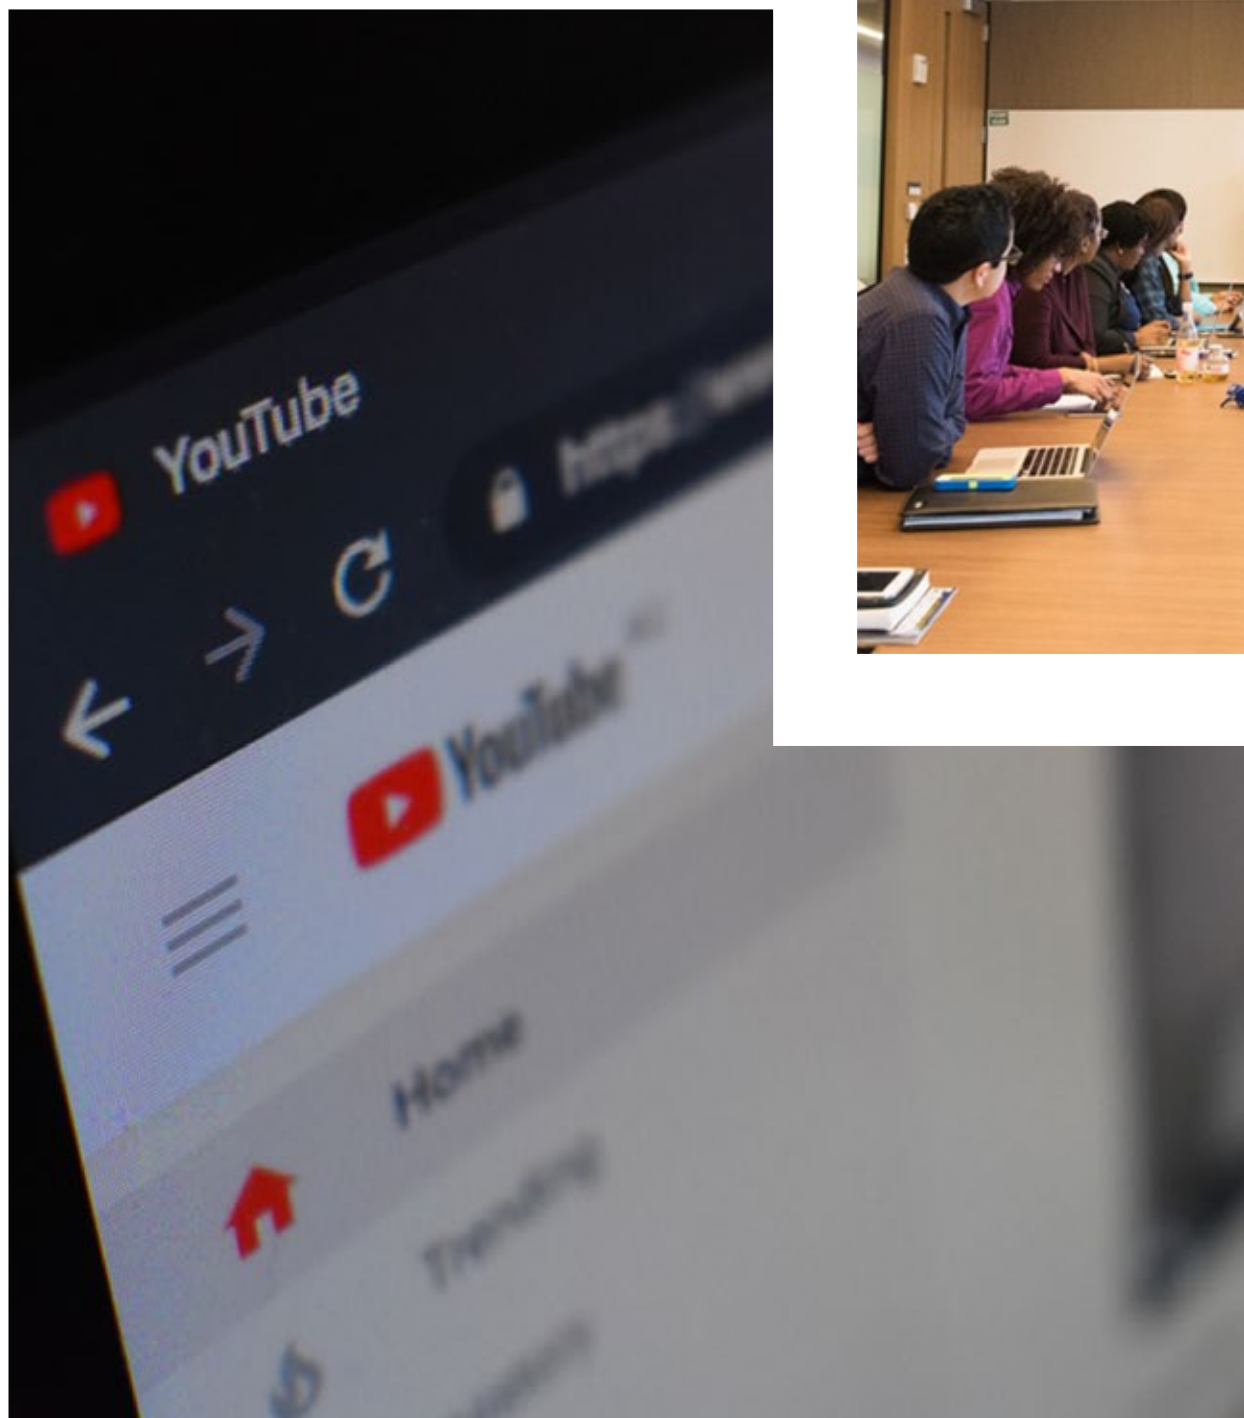

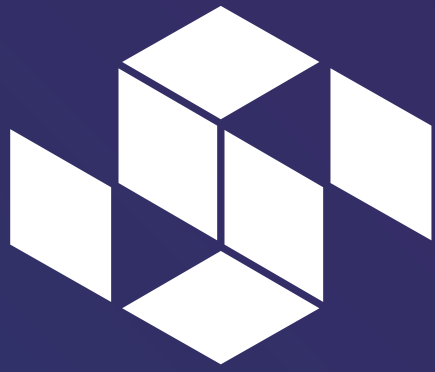

2x A/V technician

OBS.

general information

- ◆ All streaming “packs” herein mentioned are purely indicative. We are always available to study a possible customized solution to fit our client’s needs.
- ◆ A fast and stable Internet connection is essential, as it influences the efficiency of the streaming service. If necessary, the provision of Internet for the purpose can be contracted, having an associated extra cost.
- ◆ The use of custom CDN for streaming will also have extra costs in basic and intermediate solutions. In the complete solution, it is included.
